Abril, 2021

Pregunta 1

La dueña de un kiosko acaba de recibir dos docenas de empanadas de un proveedor, pero todavía no las acepta. Sabe por la factura que el peso promedio de una empanada es de 7,5 onzas, pero insiste en que todos tengas un peso uniforme. Aceptará las empanadas solo si el peso promedio es de 7,5 ondas y la desviación estándar es menor que 0,5 onzas. Los pesos de las empanadas son los siguientes.

| 6,3 | 7,2 | 7,3 | 8,1 | 7,8 | 6,8 |
|-----|-----|-----|-----|-----|-----|
| 7,5 | 7,8 | 7,2 | 7,5 | 8,1 | 8,2 |
| 8,0 | 7,4 | 7,6 | 7,7 | 7,6 | 7,4 |
| 7,5 | 8,2 | 7,4 | 7,6 | 6,2 | 7,4 |

Pregunta 1

- Organice los datos en un Blox-Plot
- Averigue si la dueña aceptara o no las empanadas
- Presente los datos en una tabla de frecuencia usando la regla de Sturges.
- Si a la dueña se le presentase esta tabla en vez de los pesos por separado, Aceptaría esta vez las empanadas?

c Usando la regla de Sturges tenemos k tal que, $k_1 = 1 + 3.3 \cdot log[n] = 1 + 3.3 \cdot log[24] = 5.55$

c Usando la regla de Sturges tenemos k tal que, $k_1 = 1 + 3.3 \cdot log[n] = 1 + 3.3 \cdot log[24] = 5.55 \approx 5$

c Usando la regla de Sturges tenemos k tal que, $k_1 = 1 + 3.3 \cdot log[n] = 1 + 3.3 \cdot log[24] = 5.55 \approx 5$

 $R = x_n - x_1 = 2$

c Usando la regla de Sturges tenemos k tal que,

$$k_1 = 1 + 3.3 \cdot log[n] = 1 + 3.3 \cdot log[24] = 5.55 \approx 5$$

$$R = x_n - x_1 = 2$$

$$a = \frac{R + 0.1}{5} = 0.42$$

c Usando la regla de Sturges tenemos k tal que,

$$k_1 = 1 + 3.3 \cdot log[n] = 1 + 3.3 \cdot log[24] = 5.55 \approx 5$$

$$R = x_n - x_1 = 2$$

$$a = \frac{R + 0.1}{5} = 0.42$$

$$L_{I_1} = x_1^3 - 0.05 = 6.2 - 0.05 = 6.15$$

c Usando la regla de Sturges tenemos k tal que,

$$k_1 = 1 + 3.3 \cdot log[n] = 1 + 3.3 \cdot log[24] = 5.55 \approx 5$$
 $R = x_n - x_1 = 2$
 $a = \frac{R + 0.1}{5} = 0.42$
 $L_{I_1} = x_1 - 0.05 = 6.2 - 0.05 = 6.15$

Asi estonces podemos dibijar la tabla:

| Tabla de frecuencias pesos | | | | | |
|----------------------------|-------|-------|-------|-------|-------|
| pesos | m_i | n_i | N_i | f_i | F_i |
| [6.15; 6.57) | 6.36 | 2 | 2 | 2/24 | 2/24 |
| [6.57; 6.99) | 6.78 | 1 | 3 | 1/24 | 3/24 |
| [6.99 ; 6.41) | 7.2 | 7 | 10 | 7/24 | 10/24 |
| [7.41 ; 7.83) | 7.62 | 9 | 19 | 9/24 | 19/24 |
| [7.83 ; 8.25] | 8.04 | 5 | 24 | 5/24 | 1 |

d Calculemos la media y desviación estándar nuevamente esta vez usando la tabla:

d Calculemos la media y desviación estándar nuevamente esta vez usando la tabla:

 $\overline{x} =$

d Calculemos la media y desviación estándar nuevamente esta vez usando la tabla:

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i =$$

d Calculemos la media y desviación estándar nuevamente esta vez usando la tabla:

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445$$

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\hat{\sigma}^2 =$$

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\hat{\sigma}^2 = \sum_{i=1}^{5} f_i (m_i - \overline{x})^2 = 0.22$$

$$\bar{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\hat{\sigma}^2 = \sum_{i=1}^{5} f_i (m_i - \bar{x})^2 = 0.22$$

$$\sqrt{\hat{\sigma}^2}$$

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\hat{\sigma}^2 = \sum_{i=1}^{5} f_i (m_i - \overline{x})^2 = 0.22$$

$$\sqrt{\hat{\sigma}^2} = 0.47$$

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\hat{\sigma}^2 = \sum_{i=1}^{5} f_i (m_i - \overline{x})^2 = 0.22$$

$$\sqrt{\hat{\sigma}^2} = 0.47 < 0.5$$

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\hat{\sigma}^2 = \sum_{i=1}^{5} f_i (m_i - \overline{x})^2 = 0.22$$

$$\sqrt{\hat{\sigma}^2} = 0.47 < 0.5$$

Por lo que la dueña aceptará la orden.

$$\overline{x} = \sum_{i=1}^{5} f_i \cdot m_i = 7.445 \approx 7.5$$

$$\hat{\sigma}^2 = \sum_{i=1}^{5} f_i (m_i - \overline{x})^2 = 0.22$$

$$\sqrt{\hat{\sigma}^2} = 0.47 < 0.5$$

Por lo que la dueña aceptará la orden. (dependiendo de su exactitud de medición)

Pregunta 2

De un examen realizado a un grupo de estudiantes, cuyas notas se han evaluado del 1 al 8, se ha obtenido el siguiente cuadro estadístico:

| T-1-1 | | | | |
|---------------------------|-------|-------|-------|-------|
| Tabla de notas del examen | | | | |
| m_i | n_i | N_i | f_i | F_i |
| 1 | 4 | | 0,08 | |
| 2 | 4 | | | |
| 3 | | 16 | 0,16 | |
| 4 | 7 | | 0,14 | |
| 5 | 5 | 28 | | |
| 6 | | 38 | | |
| 7 | 7 | 45 | 0,14 | |
| 8 | | | | |

Pregunta 2

- Complete la tabla.
- Hubo un error en la corrección del examen y a cada estudiante le suben en una unidad su nota ¿Cuanto cambia la media?.
- Si la nota mínima de aprobación del examen es 4 ¿ Cuanto cambia el porcentaje de aprobados después de la recorrección en b)?
- Calcule el Coeficiente de Variación de las notas antes y después de la recorrección.
- Que porcentaje de estudiantes obtuvo una nota mayor a 5 antes y después de la recorrección?

Solución:

Solución:

| Table de notes del evemen | | | | |
|---------------------------|-------|-------|-------|-------|
| Tabla de notas del examen | | | | |
| m_i | n_i | N_i | f_i | F_i |
| 1 | 4 | 4 | 0,08 | 0,08 |
| 2 | 4 | 8 | 0,08 | 0,16 |
| 3 | 8 | 16 | 0,16 | 0,32 |
| 4 | 7 | 23 | 0,14 | 0,46 |
| 5 | 5 | 28 | 0,1 | 0,56 |
| 6 | 10 | 38 | 0,2 | 0,76 |
| 7 | 7 | 45 | 0,14 | 0,9 |
| 8 | 5 | 50 | 0,1 | 1 |

b Media antes de recorrección:

b Media antes de recorrección:
$$\overline{x} = \sum_{i=1}^{50} m_i \cdot f_i = 4.76$$

b Media antes de recorrección:
$$\overline{x} = \sum_{i=1}^{50} m_i \cdot f_i = 4.76$$

Nueva tabla:

b Media antes de recorrección: $\overline{x} = \sum_{i=1}^{50} m_i \cdot f_i = 4.76$

Nueva tabla:

| Tabla de notas del examen | | | | |
|---------------------------|-------|-------|-------|-------|
| m_i | n_i | N_i | f_i | F_i |
| 1 | 0 | 0 | 0 | 0 |
| 2 | 4 | 8 | 0,08 | 0,08 |
| 3 | 4 | 16 | 0,08 | 0,16 |
| 4 | 8 | 0,16 | 0,16 | 0,32 |
| 5 | 7 | 23 | 0,14 | 0,46 |
| 6 | 5 | 28 | 0,1 | 0,56 |
| 7 | 10 | 38 | 0,2 | 0,76 |
| 8 | 12 | 50 | 0,24 | 1 |

b Media antes de recorrección:
$$\overline{x} = \sum_{i=1}^{30} m_i \cdot f_i = 4.76$$

Nueva tabla:

| Tabla de notas del examen | | | | |
|---------------------------|-------|-------|-------|-------|
| m_i | n_i | N_i | f_i | F_i |
| 1 | 0 | 0 | 0 | 0 |
| 2 | 4 | 8 | 0,08 | 0,08 |
| 3 | 4 | 16 | 0,08 | 0,16 |
| 4 | 8 | 0,16 | 0,16 | 0,32 |
| 5 | 7 | 23 | 0,14 | 0,46 |
| 6 | 5 | 28 | 0,1 | 0,56 |
| 7 | 10 | 38 | 0,2 | 0,76 |
| 8 | 12 | 50 | 0,24 | 1 |

Nueva media:
$$\overline{x} = \sum_{i=1}^{50} m_i \cdot f_i = 5.66$$

b Media antes de recorrección:
$$\overline{x} = \sum_{i=1}^{30} m_i \cdot f_i = 4.76$$

Nueva tabla:

| Tabla de notas del examen | | | | |
|---------------------------|-------|-------|-------|-------|
| m_i | n_i | N_i | f_i | F_i |
| 1 | 0 | 0 | 0 | 0 |
| 2 | 4 | 8 | 0,08 | 0,08 |
| 3 | 4 | 16 | 0,08 | 0,16 |
| 4 | 8 | 0,16 | 0,16 | 0,32 |
| 5 | 7 | 23 | 0,14 | 0,46 |
| 6 | 5 | 28 | 0,1 | 0,56 |
| 7 | 10 | 38 | 0,2 | 0,76 |
| 8 | 12 | 50 | 0,24 | 1 |

Nueva media:
$$\overline{x} = \sum_{i=1}^{50} m_i \cdot f_i = 5.66$$

Por lo que la media ha cambiado en 0.9 unidades.

$${\tt c}\ \frac{7+5+10+7+5}{50} =$$

c
$$\frac{7+5+10+7+5}{50} = \frac{34}{50}$$

$$\text{c } \frac{7+5+10+7+5}{50} = \frac{34}{50} \Rightarrow 68\%$$

$$CV = \frac{S}{\overline{x}} = \frac{1}{2} \int_{0}^{8} f_{i}(m_{i} - \overline{x})^{2} dx + \frac{1}{2} \int_{0}^{8} f_{i}(m_{i} - \overline$$

c
$$\frac{7+5+10+7+5}{50} = \frac{34}{50} \Rightarrow 68\%$$

 $\frac{8+7+5+10+12}{50} = \frac{42}{50} \Rightarrow 84\%$

$$S^{2} = \sum_{i=1}^{8} f_{i}(m_{i} - \overline{x})^{2} = 4.3824 \Rightarrow S = 2.09$$

$$CV = \frac{S}{\overline{x}} = 0.44$$

c
$$\frac{7+5+10+7+5}{50} = \frac{34}{50} \Rightarrow 68\%$$

 $\frac{8+7+5+10+12}{50} = \frac{42}{50} \Rightarrow 84\%$

d Antes de la recorrección:

$$S^{2} = \sum_{i=1}^{S} f_{i}(m_{i} - \overline{x})^{2} = 4.3824 \Rightarrow S = 2.09$$

$$CV = \frac{S}{\overline{x}} = 0.44$$

c
$$\frac{7+5+10+7+5}{50} = \frac{34}{50} \Rightarrow 68\%$$

 $\frac{8+7+5+10+12}{50} = \frac{42}{50} \Rightarrow 84\%$

d Antes de la recorrección:

$$S^{2} = \sum_{i=1}^{S} f_{i}(m_{i} - \overline{x})^{2} = 4.3824 \Rightarrow S = 2.09$$

$$CV = \frac{S}{\overline{x}} = 0.44$$

$$S^{2} = \sum_{i=1}^{8} f_{i}(m_{i} - \overline{x})^{2} =$$

c
$$\frac{7+5+10+7+5}{50} = \frac{34}{50} \Rightarrow 68\%$$

 $\frac{8+7+5+10+12}{50} = \frac{42}{50} \Rightarrow 84\%$

d Antes de la recorrección:

$$S^{2} = \sum_{i=1}^{S} f_{i}(m_{i} - \overline{x})^{2} = 4.3824 \Rightarrow S = 2.09$$

$$CV = \frac{S}{\overline{x}} = 0.44$$

$$S^{2} = \sum_{i=1}^{8} f_{i}(m_{i} - \overline{x})^{2} = 3.8244$$

c
$$\frac{7+5+10+7+5}{50} = \frac{34}{50} \Rightarrow 68\%$$

 $\frac{8+7+5+10+12}{50} = \frac{42}{50} \Rightarrow 84\%$

d Antes de la recorrección:

$$S^{2} = \sum_{i=1}^{\circ} f_{i}(m_{i} - \overline{x})^{2} = 4.3824 \Rightarrow S = 2.09$$

$$CV = \frac{S}{\overline{x}} = 0.44$$

$$S^2 = \sum_{i=1}^{8} f_i (m_i - \overline{x})^2 = 3.8244 \Rightarrow S = 1.96$$

c
$$\frac{7+5+10+7+5}{50} = \frac{34}{50} \Rightarrow 68\%$$

 $\frac{8+7+5+10+12}{50} = \frac{42}{50} \Rightarrow 84\%$

Por lo que el cambio es de 16% mas de aprobados.

d Antes de la recorrección:

$$S^{2} = \sum_{i=1}^{5} f_{i}(m_{i} - \overline{x})^{2} = 4.3824 \Rightarrow S = 2.09$$

$$CV = \frac{S}{\overline{x}} = 0.44$$

Despues de la recorrección:

$$S^{2} = \sum_{i=1}^{8} f_{i}(m_{i} - \overline{x})^{2} = 3.8244 \Rightarrow S = 1.96$$

$$CV = \frac{S}{\overline{x}} = 0.35$$

e
$$5 = X_{28} = P_q = X_{\frac{q(50+1)}{100}} \Rightarrow 28 = \frac{q \cdot 51}{100}$$

e

$$5=X_{28}=P_q=X_{\frac{q(50+1)}{100}}\Rightarrow 28=\frac{q\cdot 51}{100}\Rightarrow q=54.90$$

Por lo que el porcentaje menor igual a 5 será de 54.90%

Por lo que el porcentaje menor igual a 5 sera de 54.90%Por lo que el porcentaje de notas mayor a 5 será de 45.10%Luego de la recorrección se tendrá:

$$5 = X_{23} = P_q = X_{\frac{q(50+1)}{100}} \Rightarrow 23 = \frac{q \cdot 51}{100}$$

e
$$5 = X_{28} = P_q = X_{\frac{q(50+1)}{100}} \Rightarrow 28 = \frac{q \cdot 51}{100} \Rightarrow q = 54.90$$

Por lo que el porcentaje menor igual a 5 será de 54.90%
Por lo que el porcentaje de notas mayor a 5 será de 45.1%

Por lo que el porcentaje menor igual a 5 será de 54.90%Por lo que el porcentaje de notas mayor a 5 será de 45.10%Luego de la recorrección se tendrá:

$$5 = X_{23} = P_q = X_{\frac{q(50+1)}{100}} \Rightarrow 23 = \frac{q \cdot 51}{100} \Rightarrow q = 45.09$$

e
$$5 = X_{28} = P_q = X_{\frac{q(50+1)}{100}} \Rightarrow 28 = \frac{q \cdot 51}{100} \Rightarrow q = 54.90$$

Por lo que el porcentaje menor igual a 5 será de 54.90%Por lo que el porcentaje de notas mayor a 5 será de 45.10%Luego de la recorrección se tendrá:

$$5 = X_{23} = P_q = X_{\frac{q(50+1)}{100}} \Rightarrow 23 = \frac{q \cdot 51}{100} \Rightarrow q = 45.09$$

Por lo que el porcentaje de notas mayor a 5 luego de la corrección será de 54.01%

Pregunta 3

En un proceso de destilación químico, el porcentaje (Y) de pureza de oxígeno producido está relacionado con el porcentaje (X) de hidrocarburo, presente en el condensador principal de la unidad de destilación. Se efectuaron 55 mediciones, en las cuales se observaron conjuntamente las variables X e Y, cuyos resultados se incluyen en la siguiente tabla:

| | Nivel de pureza del Oxígeno (%) | | | |
|--------------------------|---------------------------------|-------|-------|--------|
| Nivel de Hidrocarburo(%) | 87-90 | 90-93 | 93-96 | 96-100 |
| 0,87 - 1,07 | 10 | 5 | 0 | 0 |
| 1,07 - 1,27 | 5 | 12 | 2 | 1 |
| 1,27 - 1,47 | 1 | 4 | 9 | 2 |
| 1,47 - 1,67 | 0 | 1 | 2 | 1 |

Pregunta 3

- a Encuentre el porcentaje de las mediciones en que se observa un nivel de hidrocarburo superior a 1.2% en el condensador principal, cuando en nivel de pureza de oxígeno es por lo menos 90 %
- b Calcule el porcentaje de variabilidad del nivel de pureza del oxígeno para los casos en que se observa en el condensador principal un nivel de hidrocarburo inferior a 1.27 %.

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |
| | |

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |

$$P_q =$$

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |

$$P_q = 1, 2$$

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |

$$P_{q} = 1, 2 = L_{p} + \frac{\frac{n \cdot q}{100} - N_{p}^{-}}{n_{p}} \cdot A_{p}$$

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |

$$P_q = 1, 2 = L_p + \frac{\frac{n \cdot q}{100} - N_p^-}{n_p} \cdot A_p = 1, 07 + \frac{\frac{39 \cdot k}{100} - 5}{15} \cdot 0, 2$$

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |

$$\begin{array}{c|c} & 1,57 & 4 \\ P_q = 1,2 = L_p + \frac{\frac{n \cdot q}{100} - N_p^-}{n_p} \cdot A_p = 1,07 + \frac{\frac{39 \cdot k}{100} - 5}{15} \cdot 0,2 \\ \Rightarrow \mathsf{q} = \! \mathsf{37,82} \end{array}$$

а

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |

$$\begin{split} P_q &= 1, 2 = L_p + \frac{\frac{n \cdot q}{100} - N_p^-}{n_p} \cdot A_p = 1, 07 + \frac{\frac{39 \cdot k}{100} - 5}{15} \cdot 0, 2 \\ \Rightarrow & \mathsf{q} = & \mathsf{37,82} \end{split}$$

 \therefore Se observa en un 37,82 % de los datos.

а

| Nivel de Hidrocarburo(%) | n_i |
|--------------------------|-------|
| 0,97 | 5 |
| 1,17 | 15 |
| 1,37 | 15 |
| 1,57 | 4 |

$$\begin{split} P_q &= 1, 2 = L_p + \frac{\frac{n \cdot q}{100} - N_p^-}{n_p} \cdot A_p = 1,07 + \frac{\frac{39 \cdot k}{100} - 5}{15} \cdot 0,2 \\ \Rightarrow & \mathsf{q} = 37,82 \end{split}$$

 \therefore Se observa en un 37,82 % de los datos.

b

| Nivel de pureza del Oxígeno (%) | n_j | f_j |
|---------------------------------|-------|-------|
| 88,5 | 15 | 0,43 |
| 91,5 | 17 | 0,49 |
| 94,5 | 2 | 0,05 |
| 98 | 1 | 0,03 |

Presentación Pregunta 1 Pregunta 2 Pregunta 3 Pregunta 4

$$\overline{Y} = 90.56$$

$$\overline{Y} = 90.56$$

$$S_Y^2 = 3.79$$

$$\overline{Y} = 90.56$$

 $S_Y^2 = 3.79$
 $S_Y = 1.97$

$$\overline{Y} = 90.56$$
 $S_Y^2 = 3.79$
 $S_Y = 1.97$
 $CV_Y = \frac{S_Y}{\overline{Y}} = 0.021$

$$\begin{array}{l} \overline{Y} = 90.56 \\ S_Y^2 = 3.79 \\ S_Y = 1.97 \\ CV_Y = \frac{S_Y}{\overline{Y}} = 0.021 \end{array}$$

Con lo que diremos que el porcentaje de variabilidad será de 2.1%

Pregunta 4

El departamento de personal de una cierta firma realizo un estudio sobre los salarios en unidades monetarias (u.m.) de 120 funcionarios del sector administrativo, con los siguientes resultados:

| Salarios | Frecuencia Relativa |
|----------|---------------------|
| 0 - 20 | 0.25 |
| 20 - 40 | 0.40 |
| 40 - 60 | 0.20 |
| 60 - 80 | 0.15 |

Pregunta 4

- Calcule la media, mediana, varianza, desviación estándar y el coeficiente de variacíon.
- Que ocurre con la varianza si todos reciben un bono de 20 u.m? Justifique.
- Que ocurre con la media si se aumentan los salarios en 80 porciento?, y con la varianza?.

Presentación Pregunta 1 Pregunta 2 Pregunta 3 Pregunta 4

$$\bar{x} = \sum_{i=1}^{4} MC_i \cdot f_i$$

$$\bar{x} = \sum_{i=1}^{4} MC_i \cdot f_i = 35$$
