Pregunta 1

En una farmaceutica se estudia el precio en dolares de 3 componentes, en los ultimos 5 años.

Año	Α	В	С
1	3	4	1
2	4	6	1.5
3	5	6.5	2
4	4.5	7	2.5
5	7	4	3

- Calcule un indice simple para estudiar la evolución de los precios del componente A tomando como referencia el primer año.
- Usando un indice complejo sin ponderar calcule la evolución de los precios en conjunto de los componentes.

Pregunta 2

El consumo de bencina en una empresa en miles de litros y sus indices de precios de este en 6 años vienen dados en la siguiente tabla:

Consumo	Indice	
60	91	
70	93	
75	95	
78	100	
80	114	
85	120	
	60 70 75 78 80	

Sabiendo que el precio de la bencina fue de 1.5 dolares por litro en el 2011, calcule el precio de esta para la empresa en cada año.

Año	Consumo	Indice 2009	Indice 2011
2006	60	91	(91/120)100=75.83
2007	7 70	93	(93/120)100=77.7
2008	3 75	95	(95/120)100=79.17
2009	78	100	(100/120)100=83.33
